

AUDIOVECTOR

THE Ki-SERIES SPEAKERS

JUST LISTEN

AUDIOVECTOR

The Ki-series was created out of simple necessity: To offer a great product to people who want the real Audiovector sound, but have limited space for speakers. We had to invent a series of new solutions for the Ki-series in order to give our customers, what they ask for: A big and full sound from very compact speakers. For both partying and soft listening. Of course, the Ki-speakers are easy to drive even with basic amplification.

The Audiovector Ki-series is futureproof and 100% upgradable, like all Audiovectors. Did you know, by the way, that more than 85% of all Audiovectors manufactured during the last 30 years are still in service?

PASSION

When I designed my first speakers, I did it out of pure necessity. I could not find a speaker, which was able to reproduce my music realistically. I had to design it myself. Since those days, nothing has changed with respect to the search for the perfect musical sound. A lot has changed with respect to

the size and looks of the speakers, people want, though.

THE CHALLENGE

I have no doubt as to what the challenge is today: To design and engineer speakers, which are compact, stylish and sound 3 times as big as their size suggests. For the Ki series, we have used a number of advanced technologies to achieve our goal of a perfect sound quality and yet shrinking the size of the speakers. Although extremely compact, the Ki's are equally capable with Michael Jackson and with Mozart. And they serve extremely well as a high quality surround sound system. They will match any source and amplifier connected to them, be it CD, iPod or computer and they will provide the great experiences, we all look for.

THE SPEAKERS

The Ki-series have 3 models in each format. A Standard, a Super and a Signature version. Each very high value for money in their price bracket. Each futureproof and upgradable.

Each a perfect part of a stereo or a surround sound system.

HANDMADE IN DENMARK

Manufacturing speakers in Denmark is an obligation towards our heritage as one of the world's most famous loudspeaker nations. At Audiovector, all speakers are handmade from the best materials: selected and pair-matched veneers, NRFB-cabinet material, drivers designed exactly for our purpose, by us and assembled and tested by the best craftsmen in the business. Our fault rate is less than 0.08 per cent. And Audiovectors will last for at least 30 years.

I have never met anybody, who could not distinguish and appreciate a perfect sound system once they heard it. As we say:
" JUST LISTEN "

Ole Klifoth
Founder and chief engineer.

SHEER PERFORMANCE. THE Ki 3-SERIES

Only a fraction wider than a CD and standing 1 metre tall, these speakers offer a full bodied dynamic sound with all types of music. They are made from the best materials available. The veneers are all selected and pair matched and the quality of the woodwork is simply stunning. Due to the use of the most modern and advanced technologies, even the most fragile of small details will be reproduced in all its timbral complexity.

Available in Standard, Super and Signature versions.

■ THE ULTIMATE COMPACT SPEAKER. THE Ki 1-SERIES

Only a fraction wider than a CD disc, these speakers are easy to accommodate anywhere. They can be placed in or on a shelf, or they can be positioned close to a rear wall. They can also be mounted on a special wall bracket, which can be adjusted as you wish. The Ki 1's share most of their advanced technology with the rest of the speakers in the Ki series. The result is a full bodied and bold sound with a dynamic performance you do not expect from such compact speakers. Just Listen

Available in Standard, Super and Signature versions.

■ COMPACT AND DESCRETE. THE K·XX

These are great compact and unobtrusive on-wall speakers designed to be used for many different applications. They are fine as extra speakers, as stereo speakers for small rooms or, because of the advanced sound dispersion system, as rear speakers in almost any type of surround sound system.

Easy to drive, easy to install
and truly universal.

■ AN EXCEPTIONALLY CLEAR DIALOG. THE Ki C-SERIES

More than 60% of the sound of a movie comes from the centre speaker. This means that speech, music and demanding special sound effects must be reproduced with true fidelity. Or, as George Lucas of THX puts it: "The sound is at least 50% of the experience of a movie". The Ki C's are almost as powerful as the Ki 3's. And as detailed and full bodied.

Available in Standard, Super and Signature versions.

■ A PERFECT POWER TECHNOLOGY. THE Ki SUB-SERIES

These new subs are rectangular, stylish and compact. They can be used in a surround sound system or as extras in combination with a pair of Ki 1's or a pair of K-XX's for stereo. More than 300 watts of power is available via the built in digital amplifier with ultra low power consumption. And all the necessary features for exact adjustment are on board. A huge truck passing by. A thunderstorm. A canon or an aeroplane: they will all be reproduced faithfully. Just Listen.

Available in Standard, Super and Signature versions.

The Individual Upgrade Concept allows you to upgrade to a higher level. And to be future proof.

The Low Compression Concept means better dynamics, longer lifetime and simply more music.

Meticulous precision in product assembly.

Attention to detail in through craftsmanship.

A fast transient response guarantees perfect musicality.

Advanced technology.

Contemporary exterior design.
