IKON MK2 surround sound system

The MK2 system shown consists of 2 IKON 6, 2 IKON ON-WALL, 1 IKON VOKAL, and 1 IKON SUB.

The speakers in the IKON MK2 series are designed and developed to suit a wide variety of needs when it comes to reproducing high performance sound in a modern home environment. The series offers both compact, medium, and large speakers, making it possible to fit a speaker system in any room without the speakers becoming dominating in any way.

Pictured above is a typical medium sized 5.1 surround sound system, based on IKON 6 front speakers, IKON ON-WALL rear speakers, IKON VOKAL 2 as center channel and the IKON SUB subwoofer for the heavy lifting, reproducing all the low frequency effects.

Multiple award winner

The previous generation of this IKON surround sound set up has won multiple awards across the world for highest performance in its class - including the award for best surround sound system of the year at the prestigious WHAT Hi-Fi AWARDS SHOW two years in a row!

Integrity Across Models

When putting together speakers for a surround sound system, it is important that the speakers are voice-matched for identical sonic characteristics. This ensures the integrity of the sound from the total surround sound system; a voice or sound reproduced through the different speakers in the system should sound the same in all speakers to create a realistic experience. One of the benefits of the IKON speakers is that they can be mixed across the different models - without compromising the integrity of the sound.

Comes in different Size

Combining the different speakers in a setup might not always be obvious. But there are numerous alternatives and plenty of models that will fit your living room. Size depends typically on how much room space you want to use on your surround sound setup.

If you have a smaller room, try combining the IKON VOKAL 2 with IKON 1, 2, ON-WALL, or even the floor standing IKON 5. If you have a medium sized room, consider IKON 5 and 6 as front speakers, IKON VOKAL 2 as center and the smaller speakers for the rears. If you can't get enough performance, consider IKON 6 or 7 for fronts, VOKAL 2 for center, and the smaller models for rears. In all cases, we recommend the IKON SUB for the low frequency effects.

The options are many - ask your dealer for advice on the perfect combination for your needs.
